As a Title one Math and Reading Teacher I am always looking for ways to help my student enjoy and love math. The book offers several ways for me to show my students how much fun math can be. The author makes the point that when the number one appears in either the tens column or the units column of a two digit multiplication the arithmetic is greatly simplified in regards to multiplication. Other tricks shown make use of the special properties eleven and nine have. This is the first time I ever opened up a math book to a new chapter and I "got it" right away. Great book and Great read.

A five star review means that I love the material. Where was this book all this time? I glanced in a cursory way only to be amazed. Why I like this book? - Math calculations where focus is on multiplications - The step by step process is explained clearly - As we go through, even the three digit and four digit multiplications are guided in a simple way - Author of this book takes us to fine heights in a step by step process. What is needed = The lessons needs paragraphing = Instead of linear explanations in every place, conventional step by step process could have helped better understanding. = Cover needs a change (Though I agree 100% on Whale's tail) Suggestions - You can give all three and the forthcoming in one book - Can brief on What is the meaning of Vedic Math? - Are there any limitations in this system. Readability 3.5/5 Understandability 4/5 Lay out, structure 3.5/5 Value for money 5/5 Usefulness 4/5 I recommend

Need more examples.

Amazing insights into simple arithmetic that I have never seen before. The identity property comes alive in this book. It is not the dry topic it was in middle school. The author has a different perspective on math, seems to come at it from a different angle than all the teachers you had previously. If math always turned you off, take a chance on this book. The author may just change your mind about the topic.

Very well written. Great overview for the Vedic math novice with practical information!
