Grade Level: Kindergarten - 4

Customer Reviews

Magnets: Pulling Together, Pushing Apart, by Natlie Rosinsky, is a 24-page book containing well-placed colorful illustrations by Sheree Boyd. The study of magnets and magnetism is a common topic in kindergarten through fourth-grade science classrooms, and --Science Books & Films This will become a wonderful science resource for our school. --Granite District, West Valley City, Utah

PWB Biography: Natalie M. Rosinsky is the award-winning author of more than 90 publications. She writes about history, social studies, economics, popular culture, and science. Natalie earned graduate degrees from the University of Wisconsin-Madison and has been a high school teacher and college professor as well as a corporate trainer. She lives and writes in Mankato, Minnesota.

CPB Biography: Natalie M. Rosinsky is the award-winning author of more than 90 publications, including 10 books about Native American tribes. She writes about science, history, economics, social studies, and popular culture. One of her two cats usually sits near her computer as she works

in Mankato, Minnesota. Natalie earned graduate degrees from the University of Wisconsin and has been a high school teacher and college professor as well as a corporate trainer.

I bought this book for my two and half year old to go along with his new magnet set. He wanted to learn about magnets because he saw them on Blaze and the Monster Machine. This book is very educational and a good read. I would recommend buying magnet kit to add hands on learning as the book asks you to do experiments.

Love this story! It is great for teaching my Kindergarteners about magnets, and there are even parts that were new info for me!

Great book for Preschool Science

A good basic book about magnetism.

Good book for elementary school.

It was for my 10yr old son..he says he enjoys it!

Very satisfied with product and service.

I believe that the only way to improve Science interests---is to begin with hands on -experiments in Kindergarten in school. I watched my own son's Science Stanford scores stay at 98% for 3 years after we left the school that had experiments in K-1 and moved to a school that did not do hands on experiments with the children writing[simple] conclusions. The only way hands on works is with parent or other volunteers at each table of 6 children.
