Combating Biofilms: Why Your Antibiotics And Antifungals Fail: Solutions For Lyme Disease, Chronic Sinusitis, Pneumonia, Yeast Infections, Wounds, Ear ... Bad Breath, Cystic Fibrosis And Implants

Synopsis

BIOFILMS ARE A LEADING CAUSE OF SUFFERING, DISABILITY AND DEATH. They are the slime layer on bacteria and fungal infections protecting them from all routine treatments. THE BEST SELLING BIOFILM BOOK IN THE WORLD! MANY SINUS, CANDIDA AND CYSTIC FIBROSIS SOLUTIONS. This solutions book addresses over twenty areas in which biofilm infections harm everyone. The 38 plus solutions to about 25 disorders are clear, based on the best published research and almost all are ready for use now. This collection exists nowhere and cannot be found on the web. No book has such a powerful research foundation, with vast clear images with a highly readable text that does not require a PhD, MD or master's degree in pure science. You simply need an interest. Solutions are proposed for ... Lyme Disease Chronic Sinusitis Pneumonia Yeast Infections Bad Breath Ear Infections Gum Disease Intestinal Disease Cystic Fibrosis Implants Acne and Many Other Health Issues Did you know common biofilms are associated with cancer, heart attacks and strokes? Many infections in hospitals and in routine illness are unable to be treated because the slime layer (biofilm) that makes antibiotics and antifungals worthless. We are close to a time when antibiotics will no longer work. This book does not go beyond the facts and try to make guesses. It offers so many options, you should be able to find a solution for most biofilm infections. This fascinating text is priced to be affordable in comparison to other older books on the same topic. From the cover ... Bacteria and Fungal Biofilms Kill and Disable! Biofilms can Weaken Antibiotics by 98% Biofilms are a disaster in medical care and can make infections impossible to kill. Many illnesses are associated with biofilms: mouth spirochetes causing plaque and gum disease, lyme disease, severe sinus infections, dangerous lung and intestinal infections, wounds, cystic fibrosis, catheters, medical implants and ear infections. This book offers Diverse Biofilm Killing Options. Dr. Schaller is a prolific, award-winning, full-time, self-funded researcher specializing in creative clinical solutions which include care for patients from all over the globe. He respects many guidelines in emerging infections, but tailors all medical care to each unique patient. Kimberly Mountjoy, M.S. is a chemist and co-author of six advanced, biochemical papers and six books. She worked in respected science centers for many years before joining Dr. Schaller.

Book Information

Paperback: 186 pages

Publisher: International Infectious Disease Press (April 11, 2014)

Customer Reviews

I ordered this book (paper version) because I was interested in a more in-depth look to biofilm I might have because of *Borrelia burgdorferi* infection. Since at the moment I am self treating, this type of information is of vital importance. I was also interested in this subject just from a pure educational point simply because "Lyme Disease" can lead to many other immune system troubles.

Pros:

1. short to the point with not too lengthy chapters, excellent for those with short attention span. Dr. Schaller explains in very simple terms how biofilms is formed, breeds, propagate and becomes eventually a main health problem. The author conversational writing style makes it a fast read in few hours. It took me four hours to read it, but understand that you will need to go back several times to absorb all the informations.
2. This is one of the few books I read of this subject that includes images. It is a tremendous aid to those of us not looking at microscope slides on the daily basis. This alone deserves 5 stars. Dr. Schuller wants readers to understand and not to be confused by lengthy explanations. A picture is worth a thousand words.
3. Brainstorming type of layout, which has been mistakenly viewed by previous readers as "disorganized". This is great for those who like to see the big picture first and then go in details right away. I am a multi-tasking individual who needs to make connections with the objective and the related sub-objective immediately. I detest rote and 1,2, 3 sequence reading, thus for my brain the book has the optimal reading flow.
4. A fairly in-depth look at diseases that create bio-film as well as type of bio-film busters listed individually.
5. A unique and scientific reading on essential oils chemical components. It made me feel better about this MD, because at this point I have lost respect for most of them. Dr. Schaller shows to be a progressive physician, at least in his book.
6. A detailed a chapter on periodontal disease and its causes. This chapter alone boosted my mood and made me feel better about being so OCD about my dental care. That aside, it instantly gives you a connection about why so many geriatric disease are related to poor dental health a connection completely missed by most physician.
7. The book gave me a faint hope about being able to treat BB a little more efficiently.
8. It

is a short and condensed guide for patients also printed in large friendly font size.⁹ Dr. Schuller has plenty of reference studies at the end of each section --for those of us who like to read the original source-- This is great because so many other books are written like dissertation papers that just offer a summary of studies excerpts pieced together.¹⁰ It offers a direct explanation of possible biofilm busting dangers to Lyme Disease patients.--Conservatively few in my opinion, I understand that the dosage of the intake of the biofilm busters is not provided because it differs from patient to patient. Fair enough for me, we are all different and I completely believe each patient dosage must be tailored to suit.--On Silver I wish Dr. Schuller would have mentioned the difference in the colloidal silver (10 ppm vs 50 ppm) application. As I am using this in conjunction with the Buhner protocol on a trial and error basis. I am assuming it would have been few chapters.

Hello, I did not have to make this request, I want you to please cancel this request. Was an error.

I purchased this book based on the positive reviews. I should have paid better attention to the negative reviews, that I agree with completely. I find this book to be an absolutely infuriating waste of time, money and paper. It's very poorly written in a very odd style, with no practical advice or useable treatment protocols. The word "profound" was used and mis-used ad-nauseum throughout the text, i.e. "Examples of Profound Biofilm Diversity..." He continually promotes all his other books throughout the text, often in bold text. Odd analogies are used: for example, on page 37, with no useful information to this point, he writes: "After writing twelve books which include many pages on non-Borrelia infections, "Lyme testing" seems like alphabet testing in which one only looks for the vowel "a". Due to the lack of acceptance of the number and complexity of tick-borne infections, there is a lack of up to date education, leaving quality medical doctors to evaluate tick and flea infections in the abstract, by which I mean that they very falsely and sadly do not realize the full magnitude of "the alphabet". Specifically, they "diagnose" by ignoring inflammation alterations, nutrient changes, hormone deficits, immunity changes caused by tick-borne infections, and chemicals made or suppressed by direct tick and flea infectious agents. I discuss these in my three most recent tick and flea infection books. All are available in English. All can be found free through inter-library loan, for less than \$20 USD, or at [www.....](http://www.freetextbooks.com) under the "free books" button..." Another odd analogy: "Searching for tick infections with one test is like writing in "Lincoln" at the next presidential election." So far, the best books I've read on Lyme and Co-infections have been by Stephen Harrod Buhner, Bryan Rosner, Connie Strasheim, and others... I just received Dr. Richard Horowitz's book, "Why Can't I Get Better, Solving the Mystery of Lyme and Chronic Disease", and it looks like it's a

very well-written, fascinating, information-dense book. There are some great YouTube videos by Stephen Harrod Buhner, and a 3-part YouTube series by Pathologist Dr. Alan MacDonald on "The Biology of Lyme Disease" that is fantastic! With all due respect to Dr. Schaller, I do not believe for a moment that he is the only resource on biofilms. Biofilms have been known about, and studied extensively, for decades. There is good information online, as well as assistance finding herbs, enzymes and essential oils that can penetrate biofilms, by the authors listed above. I hope this review is helpful for you. I hope I've saved you money that you would have spent on this barely-useful, over-priced book; money that you can now use for books written by the great authors mentioned above, or for some herbal / essential oil remedies.

Dr. James Schaller is AMAZING!!! I shared this book with my Dentist. I've shared his other books with my doctors here in the Phoenix Valley. Anyone who wants to Get and Stay Well--> NEEDS to read his stuff. What an incredible Researcher. Deb

good book

This "book" is no more than a very badly annotated bibliography. It is not even possible that these other reviews are legitimate.

pretty good book although needed much more explanation on the various types of biofilms and the herbal antifungals that destroy them.
